Using bsmConverter

1. Drag the files you wish to convert onto the window. An “Add files” message will show for files that are supported, if you try to drag files that are not supported you will see a corresponding message.

2. Select which format you would like to convert to from the dropdown menu.

3. Click the Convert button to start conversion, you will be prompted for the location where the converted files will be written.

Converting to MP3 on macOS

To convert to MP3 on macOS bsmConverter expects to find the LAME executable at `/usr/local/bin/lame`, the most straightforward method for installing LAME at the correct location is using [Homebrew](#) and typing

```
brew install lame
```

at the Terminal. You will need to restart bsmConverter after installation of LAME for it to recognise LAME is available for use.

If you do not install LAME you will still be able to convert *from* MP3 on macOS, however conversion *to* MP3 will not be possible.
