Description

Run AppleScript

(*this script runs last as the workflow quits
it checks to see if the output file exists and if it does not exist it creates an empty file. The reason it is needed is because sometimes a PDF
file will have no text and then the extractor won't create any text file. But Word Counter looks for the creation of the text file to
know when it should proceed to read in the text for counting.
*)

on run {input, parameters}
 set desktopPath to POSIX path of (path to desktop as string)
 set fileToCheck to POSIX file (desktopPath & "automatorOutputPDFtoText.txt") as string
 try
 set x to (get info for file (fileToCheck)) --if I can successfully get info for the file I know it exists
 on error
